

Herrenknecht komponenten rotary drilling rig

What is Herrenknecht vertical?

Herrenknecht Vertical's rigs and components are used for onshore and offshore drilling and workover activities in a broad range of applications. The benefits of the hydraulic rig technology come into effect to maximize customer operational and business performance.

Why should you choose Herrenknecht vertical hydraulic rigs?

Herrenknecht Vertical hydraulic rigs and components feature significant automation. They eliminate dangerous work in hazardous areas by hands-off pipe handling and enhance process efficiency and reliability via PLC control. Our drilling rigs with hook loads 170-750 tonnes are based on two hoisting concepts:

What is Herrenknecht vertical drilling?

While they are currently executed with standard drilling units, by contrast Herrenknecht Vertical designs are highly mobile and reduce flat times between different well intervention operations. The units incorporate a life well intervention possibility through the direct acting hoisting system, which works in a similar way to a snubbing unit.

What is a Herrenknecht HDD rig?

Herrenknecht HDD Rigs are defined by their pulling forces, which are between 45 and 500 tonnes (100,000 and 1,125,00 lbs). Depending on the application, the attached power packs have an output ranging from 278 to more than 1,000 kilowatts (from 370 to more than 1,340 hp) and are engineered to the customer's requirements. HDD rig types by drive type

What is the vertical drilling rig VB10?

VERTICAL DRILLING RIG VB10. The vertical drilling rig VB10, which has been developed by Bohrtec Vertical and Herrenknecht, allows the development of shallow geothermal resources. During the development of the rig, it was possible to achieve various improvements in different areas of the machine technology.

How can a hydraulic offshore rig reduce labor costs?

Shifting work to shore, such as preparing drill pipes in boxes, further reduces high offshore labor costs. Our hydraulic offshore rig solutions apply to hook loads of 150-750 tonnes. The field-proven equipment can be adapted to exploration, production drilling, work-over, P&A and other operations.

Rotary and impact drilling possible with the use of hydraulic, pneumatic or electric drives Universally suitable for use on tunnel boring machines, partial-face excavation machines, shaft ...

Rotary drilling rig is a kind of construction machinery which is used for deep pile foundation hole drilling
