What is a cybermine drill rig simulator?

The CYBERMINE Drill Rig Simulator range has been developed in collaboration with original equipment manufacturers to provide for rock drill operator training, re-training and evaluation in a simulated underground mining environment.

Why should you use a drilling construction simulator & oil rig simulator?

Our drilling construction simulator and oil rig simulator are key tools for achieving such efficiency. Continuous learning through simulation helps to reduce human error which drives reductions in non-productive time and ultimately improves oil production levels.

What is drilling simulation training system?

Simulate the pressure change of gas migration. Problems can be inserted at any time during exercise. Drilling simulation training system simulates the real equipment on real production site, including all the hardware system, panel layout, operation methods and parameter displays.

What training modules are included in the cybermine underground drill rig simulator?

The CYBERMINE Underground Drill Rig Simulator training modules also include tramming, in which the drill rig operator must employ due care and skill in order to avoid damage to vehicle components through collisions with the ceiling, walls and floor.

What is a drill simulator & how does it work?

The simulator provides training for different posts such as driller, driller assistant, drilling crew technician, drilling crew leader, drilling supervisor, etc. The simulation training can enable trainee to master the skills of soft/hard shut-in, and conventional/unconventional well killing.

Why is drill rig operator training important?
