

Not working

Why is my computer not working properly?

One of the common problems in our list of solutions for a computer not working properly is network or Wi-Fi connectivity issues. Users have reported that although the Wi-Fi connects to the network, there isn't any internet connection and nothing loads. To fix this issue, you can first try restarting your PC, as this could be a temporary glitch.

How do I troubleshoot a website or browser that is not working?

Here's what you can do to troubleshoot a website or browser that isn't working right: Check your network connection. Are you connected to the Internet? It might seem like a simple answer, but if a popular website won't load, chances are the connection has been dropped on your device and not the web server.
