What is a ROC drill?

A ROC drill is run by time brackets and ideally conducted around a large mud model, although a map may suffice if time and space are at a premium. The ROC drill provides the commander with an opportunity to ensure that all of their subordinate callsigns understand their role in potential friendly force reactions to specific contingencies.

How did a rock drill work?

(U) Rock Drills were developed as a way for military field commanders to test their battle staffs and subordinate commanders before the execution of mission. The commander would begin by disseminating his OORDER (Operations Order) for the mission. After his subordinates had time to process the order, they would be called together for a Rock Drill.

Why do I need a rock drill?
